^: Information provided by the customer.

The uncertainty is expressed in the units of measurement of the parameter to which they refer. The coverage factor is equal to $k=2$ with a probability interval of 95% and they refer to n.1 proof we did expected different indications.

When recovery is associated with the parameter, this is considered applied to the calculation of the final result.

When MC is present, the method adopted was developed within the Laboratory of the Consorzio per la tutela dell'Asti.

The Ministerial Authorization MIPAAF concerns only the accredited tests related to OIV methods.
